199	Alum	199
200	Alum	200

In the following Index,
1. Combinations (of earths and stones) that have no appropriated name, are not inserted.
2. So also are omitted all the ores which have no names, but such as are obviously descriptive.
3. The names of all compounds and super-compounds of earths and stones, and of all ores which are not obviously descriptive, so as to point out at first sight, in what part of the book, within a leaf or two, they may be sought, are inserted.
4. All synonymes are inserted.
5. In many instances, the name of a substance is inserted in two places, such as, words of which "Stone" and "Stein" are a part; so also are the vitriolic salts, and some among the German and Swedish appellations.
6. In general, references to another part of the Index, are avoided.
